Flexible wind protection

Turn-key delivery

Upgrade for existing balustrades

marine glazing - Ideas in Glass®

Product Description

The Balustrademove system is used where flexible design is required, such as for outdoor restaurant patios or sun deck areas, to transform particularly windy places into cozy corners.

The segments of the movable glass pane consists of two guide rails with integrated mechanics (gas pressure springs) and a glued safety glass, tested according to ISO 614. The glass used can be selected in different versions, as: single glazing, laminated glass, coated or tinted glass and many other possibilities. All components of the entire system are seawater resistant.

Concept

The movable pane is extended by lightly pressing it onto the upper edge of the glass.

The released gas pressure spring pushes the pane upwards turning the balustrade into a wind protection at approximately 1.9 m. Lowering the movable pane is done in a similar way: by pressing down lightly, the movable glass element lowers in front of the fixed balustrade glass and finally snaps back into its original position.

The Balustrademove system can either be a new installation or upgrade the existing glass balustrades.

The individual segments of the movable glass panel are manufactured to individual dimensions and delivered as a turn-key product.
