Printed Glass

Curved Glass

Walkable Glass

marine glazing - Ideas in Glass®

Printed Glass

A variety of techniques allow for unlimited creativity in the design of glass surfaces and make a wide range of color and light impressions possible as a result.

Glass surfaces can be creatively finished with the help of sandblasting techniques, printing techniques and adhesive films.

Special finishes such as mirror film or a matte finish also allow this glass to be used for privacy protection

Curved Glass

Free shapes and interesting surfaces – curved glass provides a particular highlight in your project.

In combination with our adhesive technology, entirely new architectural freedoms can be realized in terms of shape and design. Curved glass can be produced in all known glass structures.

Walkable Glass

Walk-on glass allows for the infinite-feeling for passengers – walking over a transparent glass bridge reveals a view of things worth seeing which are otherwise hidden.

In order to use roofing systems such as skylights or glass roofs as space which can be walked on, walk-on glass can also be used here.

Walk-on glass is available in a variety of designs. Naturally, we include the static design in the scope of delivery. Of course, walk-on glass also has a non-slip coating. You can also freely choose the color of the glass, for example in the color of an attachments with lighting effects.
