marine glazing - Ideas in Glass®

Product description

The sliding window system fits invisibly into the surrounding glass facade when the window is closed. Thereby the window appears integrated into the glass facade.

The structure is reduced to the essential parts and offers the greatest possible transparency and lightflooded areas.

Sliding windows minimize the risk of injury through, for example, due to open casements. They are preferred in pool, fitness and restaurant areas.

Concept

The window can be operated using one hand. By clasping the stainless steel handle, the brake is released and the window can be moved with very little effort and steplessly positioned.

The window solution is available as variants for insulating glass and as single pane of laminated safety glass variants.
