marine glazing - Ideas in Glass®

Product Description

Skylights which can be opened can be integrated, in a variety of sizes, into panoramic glass sliding roofs or roof systems and do not interfere with the transparent and light effect of the existing structure.

The large opening allows for efficient room ventilation and the transparent surface provides natural lighting.

Concept

Opening and closing is done using electronic servomotors which, for example, can be coupled to the air conditioning technology.

The angle of opening for the skylight can be adjusted steplessly to the desired angle.

An automatic control system which takes the time, temperature and weather factors into account can be integrated – the atmosphere in the rooms and spaces can thus be controlled effectively and in a simple manner.
